

Ecological safety of pharmaceutical production

Goal: To form ways of solving the problem of environmental pollution in the activities of pharmaceutical production

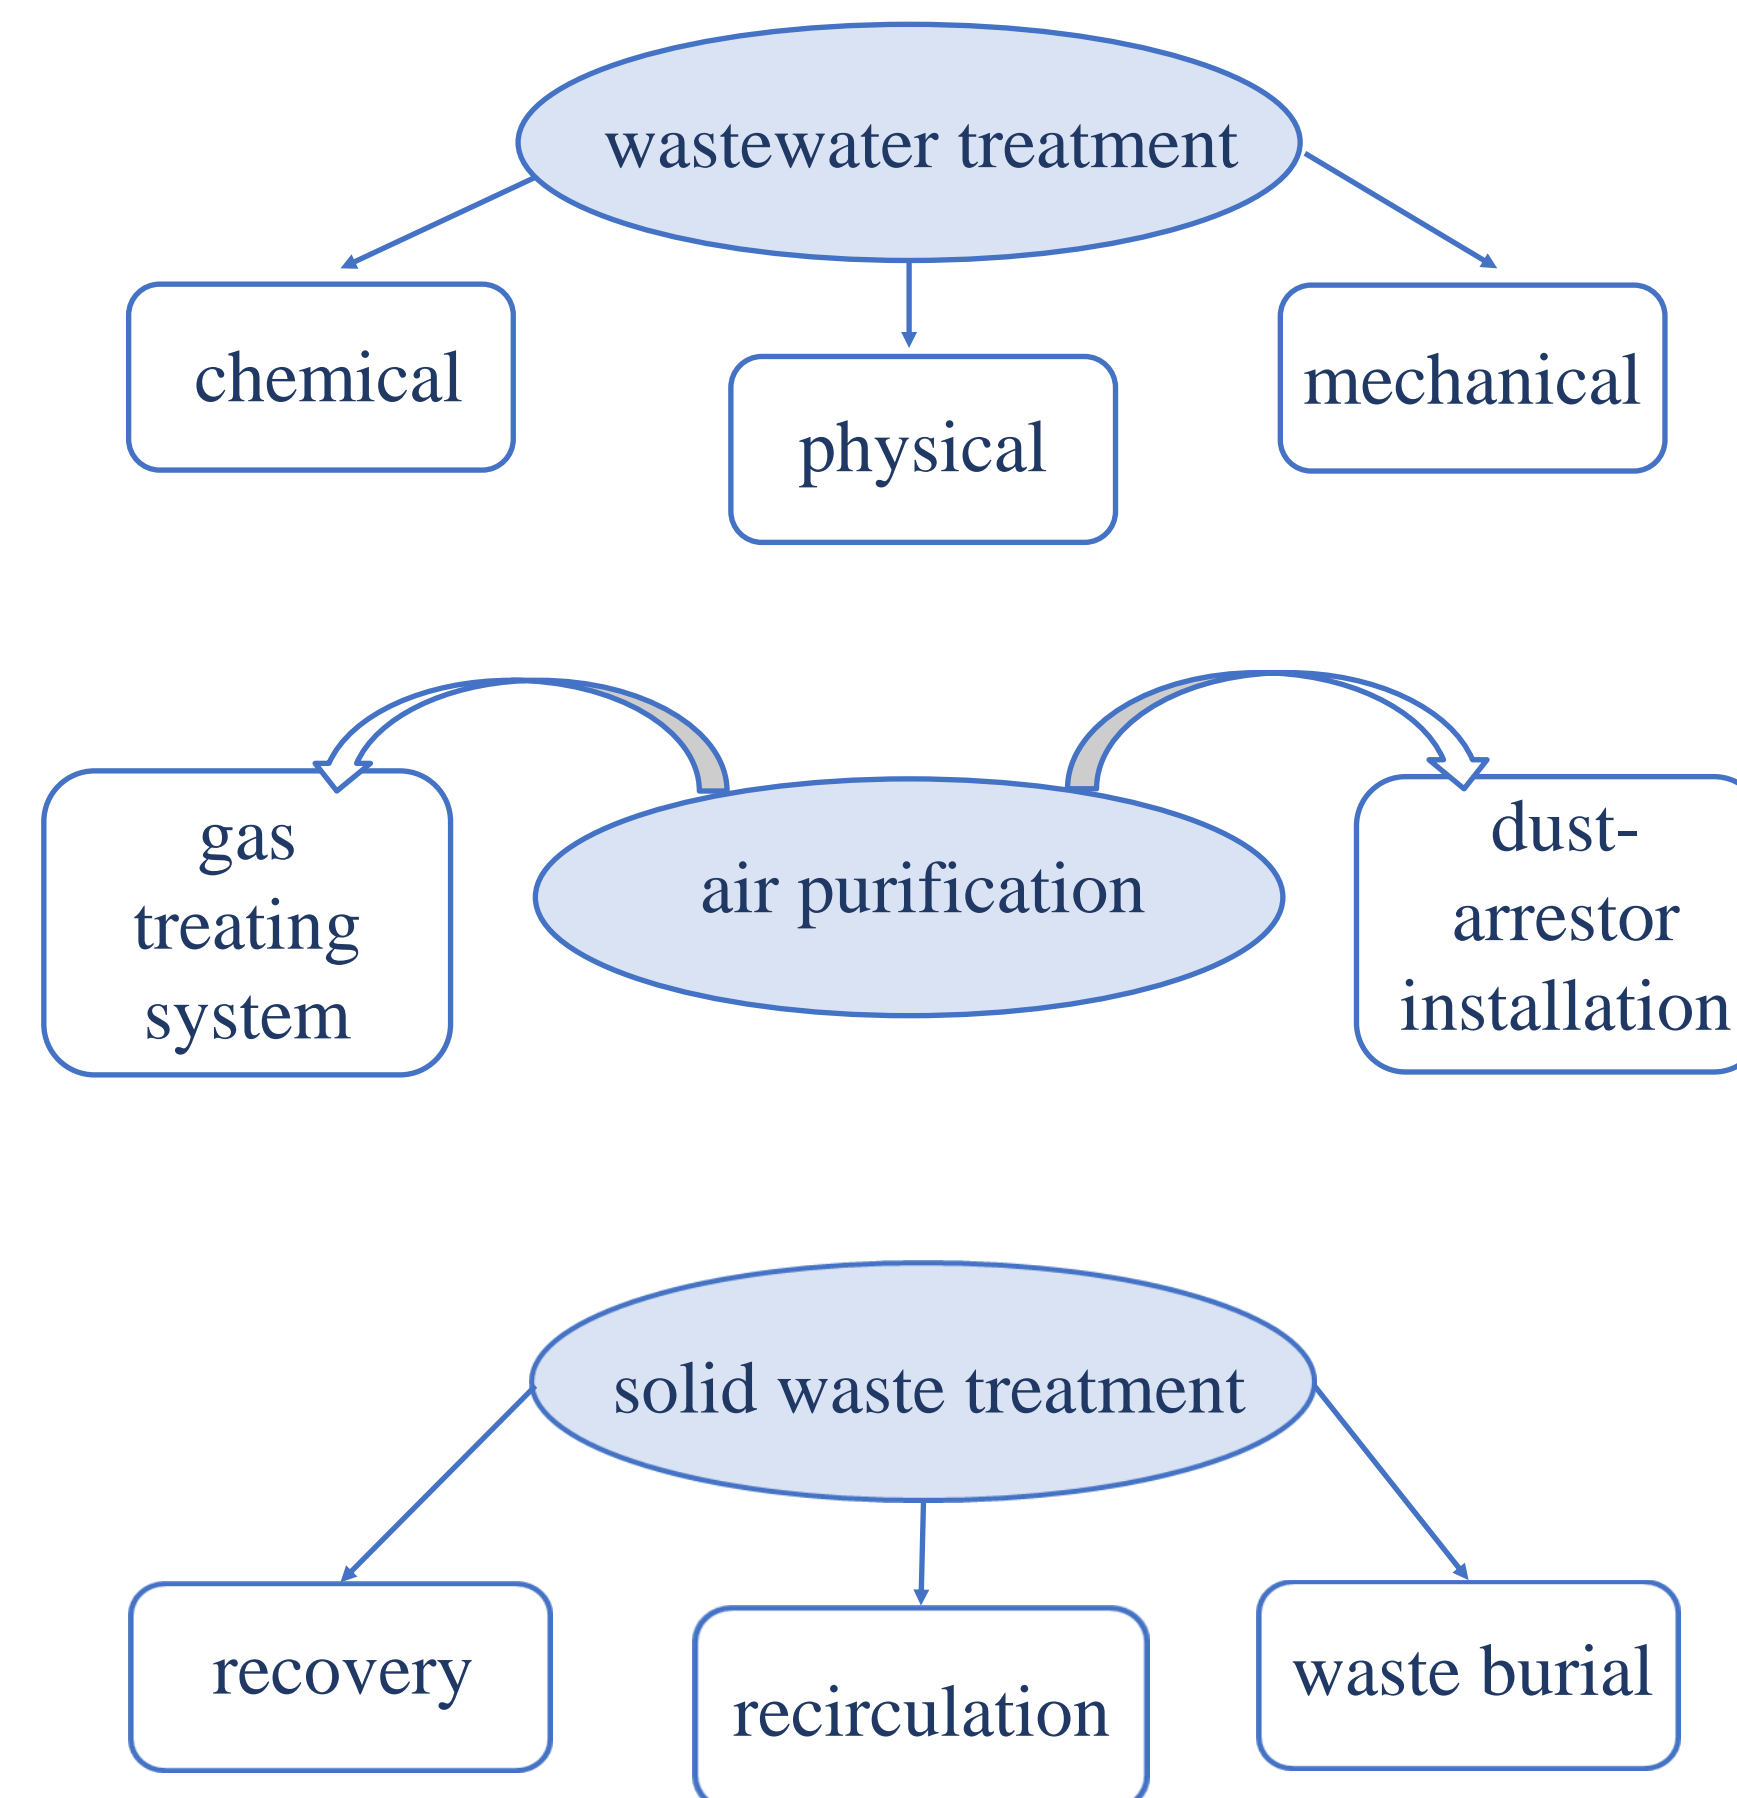

Objectives

1. To establish the sources of environmental pollution at the pharmaceutical production
2. To analyze the methods of preventing environmental pollution

$$RQ = \frac{\textit{effects}}{\textit{toxicity}}$$

RQ – Risk Quotient

It is impossible to completely get rid of the impact of pollutants on the environment, but it is possible to reduce the amount of waste. At the same time, it requires the introduction of modern methods of neutralization and utilization of waste, which will reduce the risks to the environment and human health.
