

«Green» phase modification of dihydroquercetin with L-lysine

Natural compound

Wide range
of biological effects

Commercially evaluable
active pharmaceutical ingredient

Purpose: To obtain a new functional material for pharmaceutical industry based on DHQ using «green» chemistry methods

API of DHQ
Ametis JSC, Russia

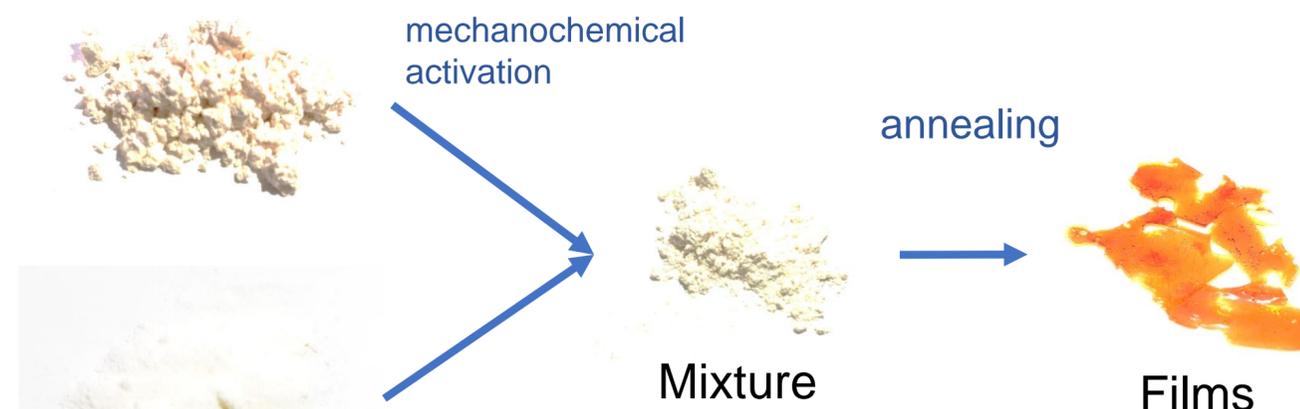

Substance of L-lysine
"AppliChem" Germany

Composition DHQ with L-lysine

Quantitative analysis

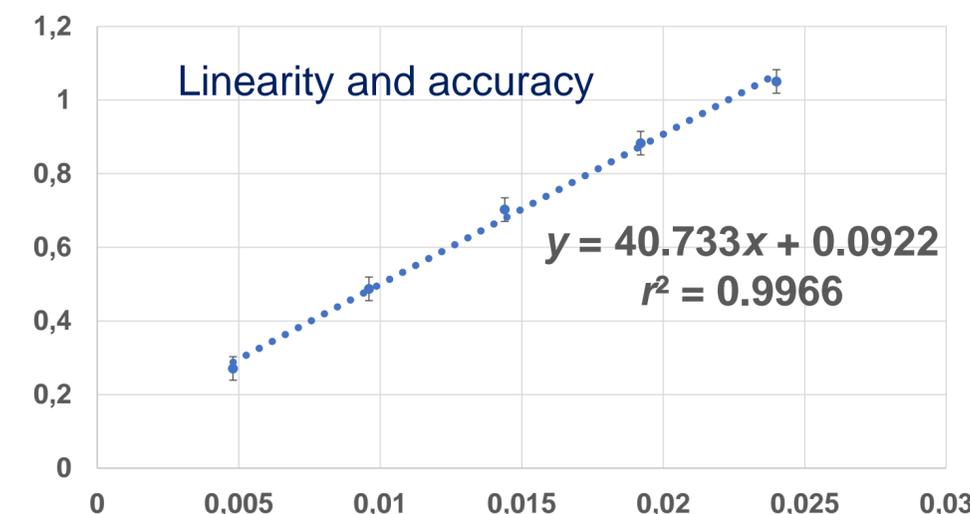

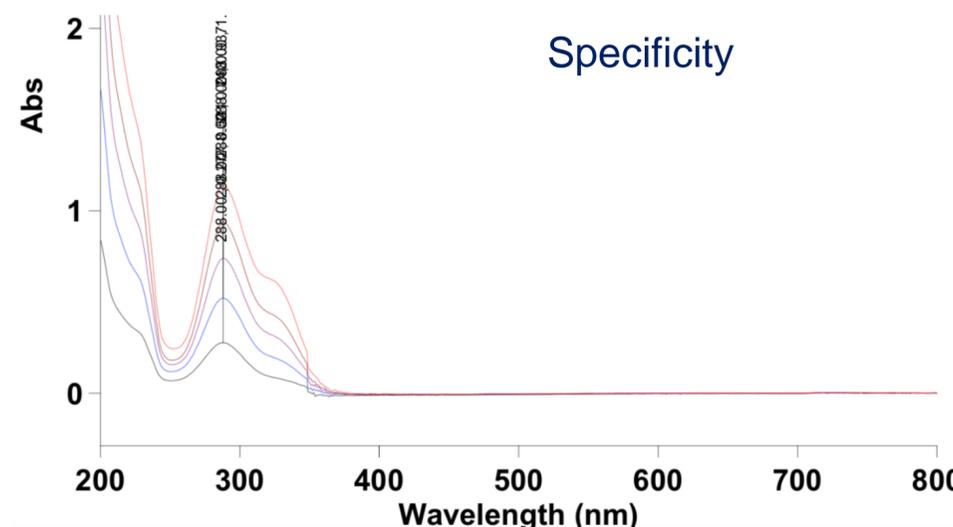

UV/vision- Spectrophotometry:
Spectrophotometr Cary 100
(Varian, Palo Alto, USA)

$$PMI = \frac{m_{total}}{m_{product}}$$

- Less hazardous chemical synthesis
- Safer solvents
- Design for degradation

PMI=3.331

An innovative functional material based on DHQ with improved biopharmaceutical parameters has been obtained. The proposed method of supramolecular synthesis corresponds to the paradigm of the principles of «green» chemistry
